

CT Secure Cloud Backup with Immutability

Making sure your data is safe, is paramount in today's risk landscape. Just backing up to Won-premise devices is not enough as threats to your data have changed from traditional risks such as fire or theft to now include security threats such as ransomware. Putting your backups in the cloud is a simple way to protect your data using the proven industry standard best practice 3-2-1 rule.

CT Secure Cloud Backup powered by Veeam Cloud Connect is an easy and straightforward way to backup and archive your data using the familiar Veeam interface. By integrating with Veeam, the world's leading Backup and Replication software, we can give you the confidence and security to backup up your data simply and affordably with no hidden charges.

Simple per Terabyte billing model

You are only billed for storage, meaning all cloud connect licensing is included

Free of charge insider protection

Create an "air gap" between your infrastructure and your data stored on ours to prevent a single incident affecting both.

UK based data centres - Tier 3+

You are only billed for storage, meaning all cloud connect licensing is included

ISO27001 accredited by BSI

All backup data is sent via a secure SSL connection and can also be encrypted at rest.

24/7 Support as standard

All our remote backup customers have access to our UK 24x7 support desk so you can be sure that you can get to your data when you need it most.

Veeam Platinum Partner

One of only 5 UK based Veeam Platinum Partners, the highest level for a service provider.

Why CT for Cloud Backup?

Secure data seeding with CT Backup Appliance

If you have a lot of data to upload and don't want to seed via the internet. Our Backup Appliance will give you the ability to seed large amounts of data to your dedicated cloud repository.

Enterprise Grade Storage

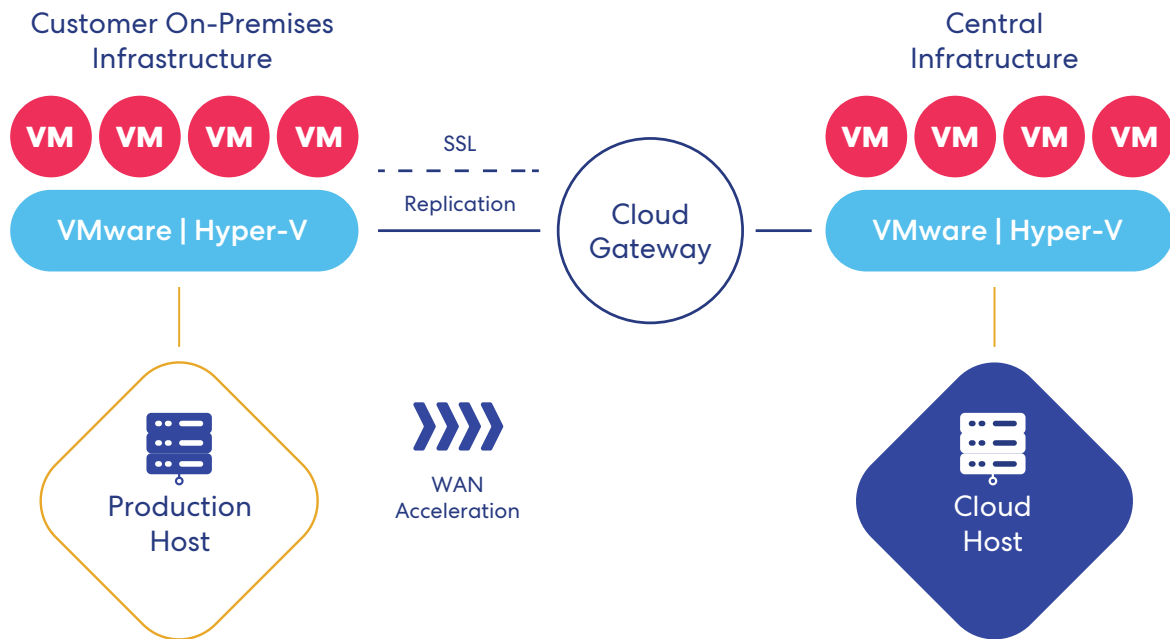

We use enterprise level Dell storage to provide a fast and efficient platform. This means you have the have the speed to quickly recover your data when you need it.

Access to CT's Secure Cloud Portal

Gain access anywhere to your Veeam backup data. It gives you complete transparency to monitor and manage your cloud repositories

How does it work?

- We deliver secure cloud storage to retain up-to-date offsite copies of your virtual and physical servers with straightforward restoration to your principal site
- Free of charge integrated “air-gapped” seven-day retention of backup data, gives great protection against ransomware and cyber-attacks
- Per TB billing model with no additional costs
- Supported by our award-winning Secure Cloud infrastructure with market leading SLA's
- Solution offers 100% compatibility with Veeam Cloud Connect architecture

Free Insider Protection

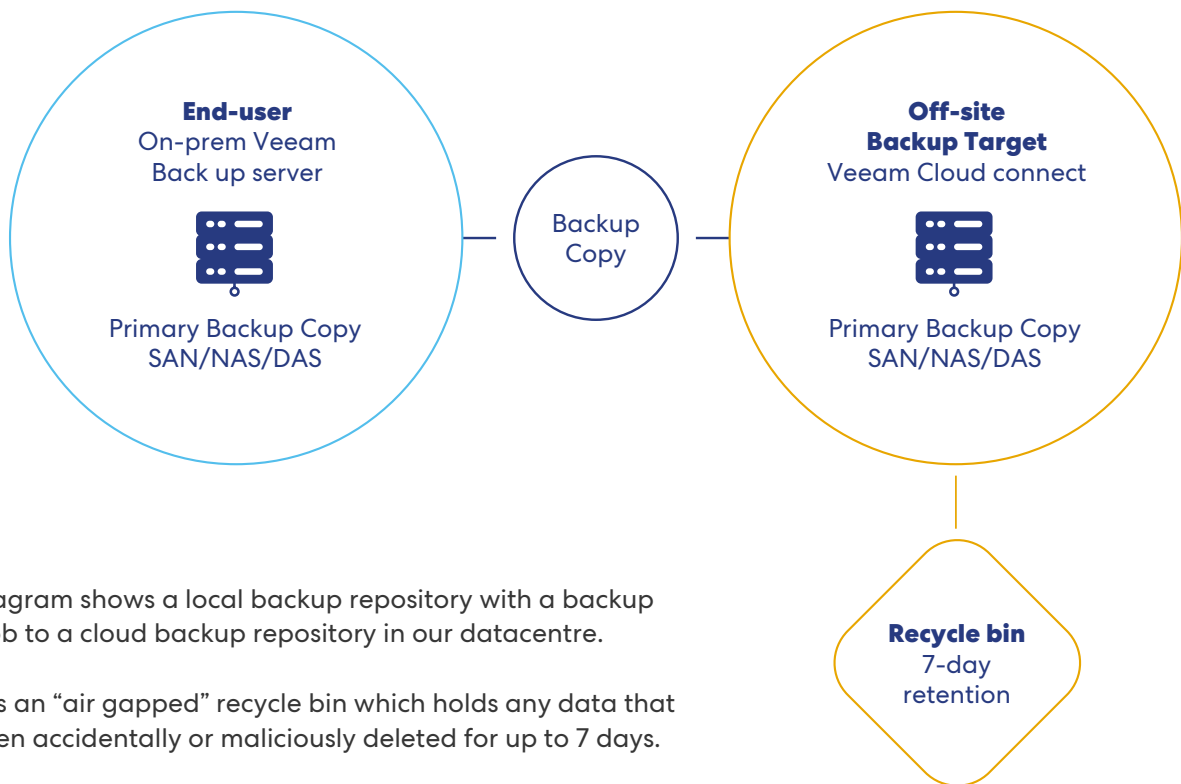

CT Secure Cloud Backup, powered by Veeam® Cloud Connect, offers customers the ability to back up their data to our secure cloud infrastructure, but in certain situations ensuring the security of primary or additional backups in a cloud repository may not be enough to ensure data security for certain situations. The backed-up data may become unavailable as a result of a malicious attack or unintentional action at the customer's end.

There are several ways a malicious user can gain access to a customer's Veeam Backup & Replication™ console and delete all tenant backups, including off-site backups stored in the cloud repository.

Our Insider protection for Secure Backup provides enhanced protection against outside and inside threats for numerous types of Ransomware. Deleted files are automatically moved to an 'air-gapped' directory that isn't visible or accessible to the customer or public routing & is all included free of charge.

Free Insider Protection

This diagram shows a local backup repository with a backup copy job to a cloud backup repository in our datacentre.

There is an “air gapped” recycle bin which holds any data that has been accidentally or maliciously deleted for up to 7 days.

Ransomware Protection: Immutability

Store your cloud backups offsite

CT Secure Cloud Backup enables you to store your cloud backups offsite with the protection of immutability.

Your data is safe

Leveraging an immutable copy of your backup data ensures that there is an untouched version of that source data that is always recoverable and safe from any failure scenario.

Comprehensive backup solution

Our Insider Protection feature gives you a comprehensive backup solution against all threats.

Prevents data deletion or modification

Immutability is a solution that prevents data deletion or modification from the storage.
