

# CT Secure Disaster Recovery as a Service

Threats to business continuity are very real and the impact can bring your business operations to a standstill.

Ensuring that business applications work for your business is paramount. Recent studies show that around 43% of businesses that fall victim to a disaster event succumb to it and never recover. Another whopping 51% of businesses close within two years after an IT and infrastructure loss caused by the disaster.

## Turn key DRaaS from anywhere

- Anywhere management & reporting using CT's Secure Cloud Console.
- Assisted or Non-assisted failover and onboarding, depending on your needs.
- Unified management of Disaster Recovery failover plans for test and live failover.
- Colocation of firewalls, legacy systems and hardware platforms.
- The ability to replicate both VMware and Hyper-V hypervisors.
- Dedicated solution powered by Veeam Cloud Connect.
- 100% uptime SLA's.

Only 6% of companies survive the catastrophic conditions and lead a successful long-term life.

Our affordable DRaaS solution is a prevention rather than a cure. In the event of a disaster scenario, you can instantly 'spin up' your infrastructure in our UK data centres within a matter of minutes.

### UK based data centres - Tier 3+

All our infrastructure and support is UK based, we can be flexible to help get backup data to you.

### 30 days failover at no extra cost

In the event of a full DR scenario, you will be able to 'spin' your environment up in our data centre/s at no extra cost for 30 days.

### 24/7 support as standard

All disaster recovery customers have access to our UK 24x7 support desk so you can be confident you can access your data when you need it.

### Include DR testing

We provide full assisted failover testing with all DRaaS solutions. An engineer will support you to run any failover tests. You will get 5 days of testing per quarter, at no extra cost.

### All-inclusive per terabyte billing model

All our remote backup customers have access to our UK 24x7 support desk so you can be confident you can get to your data when you need it most.

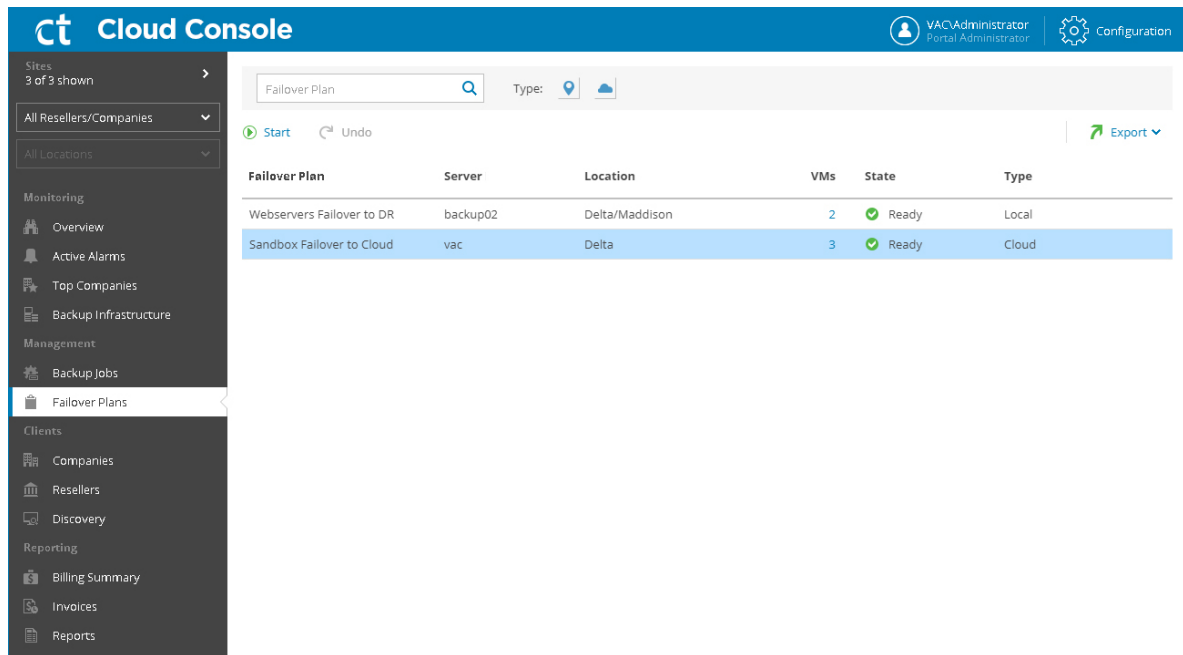

### Secure seeding

Our seed servers enable you to transfer large a large amount of data, fully encrypted and shipped direct to your business.

# Anywhere management, faster recovery time objectives

Historically, you would have had to transfer all your data to a target location before being able to access and test applications. Furthermore, all these systems would need managing to make it all work.

CT Secure DRaaS allows you to spin up your VMs via our Cloud Console. This gives you true 'anywhere management' of your DR environment and failover plans. This allows you to drastically improve recover times and gives you're a single pane of glass for your DR environment.

The screenshot shows the CT Cloud Console interface. The top navigation bar includes the CT logo, 'Cloud Console', a user profile for 'VACAdministrator Portal Administrator', and a 'Configuration' gear icon. A left-hand sidebar contains various menu items: Sites (3 of 3 shown), All Resellers/Companies, All Locations, Monitoring (Overview, Active Alarms, Top Companies, Backup Infrastructure), Management (Backup Jobs, Failover Plans), Clients (Companies, Resellers, Discovery), and Reporting (Billing Summary, Invoices, Reports). The main content area displays a search bar for 'Failover Plan' and a 'Type' filter. Below this is a table of failover plans:

Failover Plan	Server	Location	VMs	State	Type
Webservers Failover to DR	backup02	Delta/Maddison	2	Ready	Local
Sandbox Failover to Cloud	vac	Delta	3	Ready	Cloud

## Test

Test your disaster recovery plans via the CT Cloud Console whenever you want – We give you 20 days a year for testing totally included (5 days a quarter).

## Automate

Automate your failover plans – This helps reduce errors with the failback process when doing either a partial or full failover.

## Recovery point objectives

Tailor the Recovery Point Objectives of each VM individually or as a group.
