

Professional IT Services

Our Professional IT Services are comprised of the very best IT consultancy services to ensure we align the right technology to your unique business plan. We specialise in a full range of IT services, whether it's delivering a new project or procuring the newest technology, we ensure that everything is centred around your goals.

How our strategic consultancy could benefit your business

Upskill your team with CT Knowledge

Our CT Knowledge platform offers over 100 3-minute videos which aim to help your team learn new skills and make the most of your important business platforms.

We work in partnership with you

By working in close partnership with you, we can help you achieve your business goals by developing a strategy that will deliver the results your business needs to thrive.

You can tailor your support

We can provide a tailored, bespoke plan where the amount of involvement and level of consultancy is adjusted to suit your needs.

We partner with world-leading companies

We work with world-leading manufacturers to supply your full range of IT, Cloud, Cyber Security and Communications solutions. Our accreditations speak for themselves and we can assure you'll only get the best.

Plan for serious events with Disaster Recovery

We provide enterprise level DRaaS services to hundreds of customers in the UK who can't afford for their IT environment to be offline for any significant amount of time.

With the help of our **Strategic IT Review**, you can identify you can identify your short, medium and long term IT requirements. This provides direction and focus to allow you to work in partnership with us to an agreed technology roadmap with specific, measurable targets.

How a Strategic IT Review works

A senior member of our team will arrange a remote or face to face meeting, to understand your business goals, challenges and risks.

We would then carry out an IT audit, either onsite or remotely and deliver our findings back to you, which will be presented as a high-level roadmap that outlines the prioritisation of short, medium and long-term IT requirements.

We've broken down the 5 steps to our Strategic IT Review below:

- 01** We invest time to understand your organisations current IT infrastructure and company vision
- 02** We perform an infrastructure audit and in depth analysis of your business and technical objectives
- 03** We evaluate all of the information we've gathered to determine your technology roadmap
- 04** We present our findings, recommendations and risk analysis
- 05** We propose a detailed plan and prepare a schedule of delivery
